MARKETING WESTERN AND CENTRAL NEW YORK ONIONS 1954-55 SEASON

Daily Market Reports on onions were issued from the Rochester Office of the Federal-State Market News Service from September 5, 1954 through April 29, 1955. The information contained in this summary was obtained principally from these reports and from releases of the Crop Reporting Board, Agricultural Marketing Service, U.S.D.A. and from the Office of the State Statistician, Albany, New York.

UNITED STATES

The production of onions in the 17 Late Summer States was estimated at 32,203,000 sacks of 50 pounds each, about 12 percent below last year. The acreage in this group of States was 57,080 as compared with 60,800 during 1953 while the 4-year (1949-52) average was 64,390 acres. Yields per acre showed a slight decline this year, 564 sacks as compared with 601 during 1953 but slightly higher than the 4-year average of 494 sacks per acre. Minnesota with increases in both acreage and yield was the only State with a significant increase over last year's production. Smaller production in New York, Michigan, Colorado and California accounted for most of the decrease in production in the late-summer states.

NEW YORK STATE

Frequent rains during April and the first half of May delayed plantings in most areas of Western and Central New York. Some wind damage was reported in the Elba and Oswego sections. During July very little rain fell and this caused growth to stop, especially in the Elba section, and this resulted in smaller sizes and a much higher percentage of picklers than last year. Seed onions in all sections of the State except Orange county stayed green and continued to size through the cool, rainy weather of August. Harvesting started in late August. By October 1, harvest was nearly completed in all sections, although late fields were still green and standing late in September. Periodic rains and cloudy weather hampered harvesting and curing which resulted in delay of movement to market and storage.

Production in New York State this season was about 14 percent below last year's record crop. Production this season was estimated at 9,024,000 sacks of 50 pounds each compared with 10,440,000 sacks during 1953, while the 4-year (1949-53) average was 6,926,000 sacks. Acreage planted this season was 400 acres less than a year ago; 14,100 acres compared with 14,500 in 1953, while the 4-year average was 14,700 acres. Yields while lighter than last year were still much heavier than average; 640 sacks per acre this season as compared with 720 sacks during 1953 and 471 sacks for the 4-year average. In the following table will be found acreage, yield per acre and production by counties for 1954 as compared with 1953.

NEW YORK ONIONS: Acres for harvest, yield per acre and production 1953-54

Section	Acres for harvest		Yield per acre		Production

1/ Thousand sacks						

F.o.b. prices this season were nearly twice those received for last year's crop. 50 pound sacks, Yellows, US#1, 70-80% 2 inches and larger ranged from \$.80-1.90 this season as compared with \$.50-1.00 last season. Prices paid growers this year ranged from \$1.50-3.00 bulk per cwt. for medium to large stock as compared with \$.50-1.50 during the 1953-54 season. Weekly price ranges will be found on another page in this summary.

The rail movement this season through April 23 was 1,882 cars as compared with 2,053 through the same date last season. Truck movement continues to increase and reliable estimates place this year's movement by truck at 75-80 percent of the total production. On the last page in this summary will be found carlot unloads by States of Origin for the calendar year 1954 and truck unloads in 21 Cities which shows 5,889 carlot equivalents unloaded from New York in 21 Cities during the year 1954.

1/ Mostly for fresh market but includes production used for processing and for dehydration.

2/ Acreage available for harvest including mature acreage abandoned or only partially harvested because of low prices or other economic factors.

3/ Group averages (including All States) are simple average of annual data for the group.

5/ Equivalent 50 pound sacks.

6/ Includes some quantities not harvested and excluded in computing value: Early Spring, Texas 1,165,000 sacks in 1953; Late Spring, California, 662,000 sacks in 1953; Arizona 660,000 sacks in 1953; Georgia 60,000 in 1953; Early Summer, Washington 73,000 sacks in 1953; Oklahoma 7,000 sacks in 1953; Late Summer, Washington 100,000 sacks in 1953.

ONION STOCKS REPORT FOR JANUARY 1, 1955

Stocks of onions held by growers and dealers in common and cold storage in New York State on January 1, 1955 are estimated at 2,400,000 50-lb. sacks, 38 percent below last year's record stocks. January 1, 1955 stocks amounted to 27 percent of the 1954 crop, while stocks a year ago covered 37 percent of the record 1953 crop. The stocks estimates cover the quantity of sound onions in storage as of January 1. Allowance has been made for shrinkage and other losses from harvest to January 1 but no attempt is made to estimate additional shrinkage and losses that will occur after January 1.

The location of the estimated stocks in New York on January 1 of 1955 and 1954 is shown by sections in the table below. The stocks in Orange County include some onions grown in other sections of the State. Very few out-of-state onions were in storage in New York on January 1 this year.

ONIONS Total stocks in common and cold storage on January 1, 1954 and 1955, N.Y. State by sections

2/ Cold storage holdings in all states, as reported to the Agricultural Marketing Service, U. S. D. A.

ONION STOCKS IN STORAGE -- JANUARY 1, 1955

Stocks of onions held in common storage in the United States on January 1, 1955 are estimated at 8,942,000 sacks (50 pounds), according to the Crop Reporting Board. These holdings are 20 percent smaller than the 11,213,000 sacks in common storage a year ago but are 20 percent larger than the 1946-53 average January 1 stocks of 7,460,000 sacks. Cold storage holdings of onions on January 1, reported to be an equivalent 1,032,000 sacks, were 12 percent less than last year and 32 percent below the 1946-53 average. Combined common and cold storage holdings on January 1, 1955 of 9,974,000 sacks were 20 percent below those on hand a year ago and 11 percent above the average combined stocks on January 1.

The Crop Reporting Board has used the same definition of onion stocks as in the past in preparing this report. Common storage stocks relate to quantities of sound onions held by growers and dealers on January 1. The estimated quantity of onions lost before January 1 through grading, dumping, shrinkage and decay is deducted in estimating stocks on hand January 1, but no attempt is made to estimate additional shrinkage and loss that will occur after January 1.

The percentage of 1954 crop onions lost prior to January 1 from grading, dumping, shrinkage, and decay was greater than last year and average. Heaviest rate of loss has occurred in Indiana, Illinois, Wisconsin, Idaho, Eastern Oregon (Malheur Co.), and Washington but increases in losses in these States were partially offset by reduced losses compared with last year in Minnesota, Colorado and Western Oregon (Willamette Valley). Because of the poor keeping quality of onions on hand January 1 in some areas, it is expected that the percentage lost after January 1 from shrinkage and decay will be greater than usual.

ONIONS January 1 stocks held in common storage by growers and dealers in Late Summer States, and January 1 stocks in cold storage in all States by regions, average 1946-53, annual 1954 and 1955.
